# MINSOFT LIMITED

## COMPANY PROFILE

Leonard Wanusim | Solution Architect | May 24, 2016

## About Minsoft

Minsoft Limited is a Software Design and Development company based in Port Moresby. The company was started in 2010 as a freelance ICT consultancy and fast become more specialized in custom software development. Today Minsoft has a proud record of developing and delivering small to medium to large size enterprise software solutions for clients all across Papua New Guinea.

## What We Do

We understand the need and use of business software in Papua New Guinea and in fact the demand has been on a steady rise. Determining your software requirements in the context of your overall ICT infrastructure in an ocean of available software solutions is not a simple task. Our experience with many clients around the country is that many start their journey of seeking and acquiring a software without understanding their actual need for a software solution.

We at Minsoft not only understand software solution by design but its implementation and continuity to ensure maximum return on investment. We can assist you from the start by evaluating and mapping out your business requirements for a software solution and then assist seeking out, evaluating and acquiring the most appropriate software solution. In most case we design and develop a complete new custom software system that meets your business requirements.

## Our Expertise

Our knowledge in Software Technologies in designs and development cross platform and device is our advance over many established ICT companies in Papua New Guinea. We have delivered on record time within budget using the following technologies.

- |      |                                      |  |

# api management

Microsoft Azure

Microsoft Azure API Management makes it easy for organizations to publish APIs to partners, employees and third-party developers securely and at scale.

A robust API program opens new channels to new customers and enables an organization to monetize its core product, transform its product into a platform, and create new content distribution channels.
